                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence contained an oligo-off track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag tresent in the cDNA hetween the NotI site and the oligo-dirack served to verify it as clone from the normalized ventricle at 16.5 dpc library DNA library Preparation: N.B. Soarces and Clone distribution: clones will be available through Research Generics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 1-41.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 451 Eckstein Medical Research Building Iowa City,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence contained in oligo-dy track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonside poly A tall. The sequence tag present in the cDNA between the NCI site and the oligo-dy track served to identify it as a clone from the normalized Ay canal at 15 dpc library cDNA tibrary Preparation: M. B. Searces Lab Clone distribution: clones will be available through Research Generics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 1-41.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AWJ51200 390 bp mRNA EST 17-DEC-1999 U1-R-BJO-adf-d-02-0-U1.sl U1-R-BJO Rattus norvegicus cDNA cione U1-R-BJO-adf-d-02-0-U1 3', mRNA sequence.

DOUGLE BEIO930 93 bp mRNA EST 13-JUN-2000

DEFINITION U1-R-BS1-azd-d-09-0-U1.S1 U1-R-BS1 Rattus norvegicus cDNA clone
U1-R-BS1-azd-d-09-0-U1 3', mRNA sequence.

ACCESSION BEI0930 9
The sequence contained an oligo-dT track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Not1 site and the oligo-dT track served to verify it as a clone from the normalized embryo at 13 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence contained an oligo-dT track that was present in the oligonucleotida that was used to prime the synthesis of first strand DNA and therefore this may represent a benafide byte tail. The sequence tay tracks that in the DNA between the NCI Site and the oligo-drawk is greed to destify it was close from the normalized AV canals at greed to the tity it was a close from the normalized AV canals at greed to the oligo-dNA bilary Preparation. The ormalized the contains a contains closes will be available through Research Genetics (www.resgen.com) The following reputitive a newestary are found in this CNA sequence: 1-41.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Contact: Soares, MB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               oligonucleotide that was used to prime the synthesis of first strind cDNA and therefore this may represent a bonafide poly A tail. The sequence top present in the cDNA between the NoI site and the oligo-dr track served to identify it as a clone from the normalized ventricle at 16.5 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 1-41,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AV$252673 4/75 bp mRNA EST 17-DEC-1999 UI-R-BJO-aeb-c-05-0-UI-3 UI-R-BJO-aeb-c-05-0-UI 3', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       University of Towa

Vector DNA was prepared from a derivative of pND42 (91/4732114/gb)AF129072.1), a copy-number inducible derivative of plasmid RL. The vector was liquted with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Biomedical Polymers Research Bldg., 20 S. 2030 E., SLC,
                                                                                                                                                                                                                                          (http://www.jax.org/resources/documents/dnarcs/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclestide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The captured DNA was purified and size-selected for a 9.5 to
adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Soybean EST Project
                     'note-'Woctor pBluescript IJ SK+, Site_1: Rowh; Site_2: Xhoi: The Clark NIL was constructed and seed was provided by Dr. J. Specht; University of Nebraska (Shoemaker and Specht, 1953). The clowal library was constructed from mRNA isolated from whole seculings of 3 week old greenhousew grown plants. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a thoir restriction site and a 3 anchor. EcoRi adapters were ligated to the blunt-ended cDNA fragments followed by Xhoi digestion. The cDNA fragments were directionally cloned digestion. The cDNA fragments were directionally cloned
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                52.00
